

the leaders in water purification

we design, manufacture, install, service and support high performance water purification systems that add real value to industrial, healthcare and laboratory operations

Water Purification Systems UK

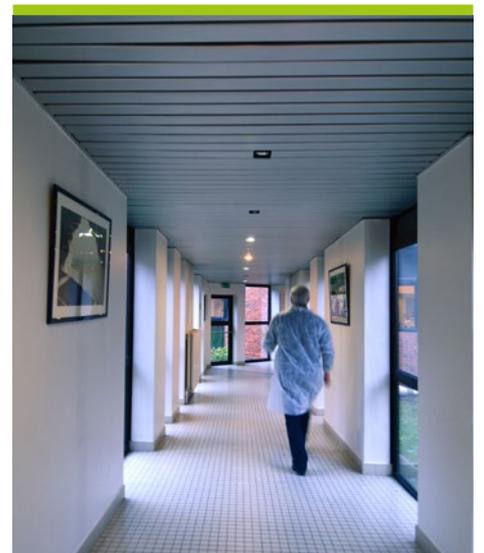

blazing a trail for water purification technology

SUEZ Water Purification Systems UK has been designing, developing and manufacturing industry-leading water purification systems for customers in laboratories, healthcare, electronics, manufacturing, food & drink and chemical production for more than 40 years.

From the first blueprint through to final installation, we offer both standard and custom built water purification systems that are best-in-class for quality, reliability, functionality and performance; even when coping with the most demanding of applications.

Our 360 degree service goes beyond installation. Our experienced and expert design, engineering and support team ensure that every system remains up to the technical and commercial specification you initially required.

SUEZ Water Purification Systems UK's four decades at the global forefront of our sector did not happen by themselves. It's a reputation and heritage built on long-lasting partnerships, mutual trust and our ongoing commitment to provide real value and innovative solutions for today, tomorrow and far into the future.

water purification for...

laboratories

Spearheading the manufacture and supply of self-contained and purpose-built water purification units, SUEZ Water Purification Systems UK provides for all types of laboratory and research applications, from glassware washing, through reagent make-up, to cell culturing and DNA sequencing.

Our laboratory units use proven reverse osmosis membranes, integrated in advanced systems with UV photo-oxidation, ion exchange and sub-micron filtration, capable of producing water purity of up to 18.2M Ω at production rates up to 30 l/hour.

Cost-effective, reliable, and inexpensive to maintain, SUEZ Water Purification Systems UK solutions are easily installed and understood. Which means your lab teams can get working and start solving in no time.

healthcare

Wherever and whenever healthcare is in need of a water purification system, SUEZ Water Purification Systems UK provides the solution.

Whether that's for renal dialysis or sterile services in hospitals, clinicians seeking answers via laboratory analysis or instrument disinfection for dental services, we have the capabilities to build and deliver systems built to last, that comply with the highest quality and safety standards.

industry

Working across food and beverage, chemical processing, power generation and industrial finishing, we have the knowledge, experience and resources to deliver solutions from a small packaged unit for microbreweries, to a large scale integrated system for petrochemical production.

Our systems perform under the most demanding of conditions. As a result, our specialised reverse osmosis, filtration and control technologies offer reliability, simplicity of operation and ease of maintenance, giving the lowest possible cost of ownership.

24/7 service

Total lifetime support is a vital element in the services that we provide to all our customers, from a small laboratory with a single benchtop unit, to a major healthcare or industrial organisation with multiple systems or a complex high volume water purification plant.

Our customer support services include system design and build, installation and commissioning, plus 24/7 long-term maintenance contracts to optimise efficiency and minimise through-life costs.

We also hold extensive stocks of consumables and spare or replacement parts that are available as and when required.

Our team of experienced and regionally based engineers provide dedicated applications and telephone support - both by phone and onsite - including consultancy, trouble-shooting and product training.

global support

We are part of SUEZ, one of the world's largest providers of water, waste and management plant and services.

Being part of this wider infrastructure gives us access to an extensive network of global resources, plus the people that possess the experience, skills and knowledge that make our business better.

We offer dedicated resources through a comprehensive network of over 50 distribution channels, encompassing North America, Asia, Europe, Africa and Australasia. Our complete and innovative range is supported by an approved local distributor, ensuring a secure and cost-effective service, a supply of critical equipment and ultimately - peace of mind.

Every day we turn this to our customers' advantage, delivering ideas, solutions and support that improve water quality, system performance and return on investment.
